

THE LIGHTING SPECIALISTS

JOURNEY INTO
THE WORLD OF
EXQUISITENESS

RDK Lighting Solutions, an ISO 9001-2015 certified UAE-based company was established in 1987 with the intent of bringing state-of-the-art lighting products & solutions to the Middle East. With more than 3 decade of successful history, it has become a clear leader in its domain, having handled some of the most iconic projects of the region and the world.

At RDK, we provide the entire spectrum of Integrated Lighting Solutions - whether it is getting involved with the architects at the concept stage to build lighting design as an integrated part of the project, defining technical specifications, supplying & installing quality lighting products during the execution stage, providing value-engineering services at any stage in order to help re-align the project objectives and costs with changing market dynamics and conducting light audits with comprehensive reports for the existing installations.

Our product & service portfolio covers the entire range of lighting needs, including Outdoor and Indoor lighting for Residential, Commercial, Retail, Hospitals, Parks, Roads & Streets, Parking, Tunnel, Industrial, Sports Complexes, Lighting Controls, Emergency and Central Battery Systems.

We firmly believe that the future is in integration of services, resulting in better & cost-effective solutions for clients and the requisite technical / commercial support for consultants and contractors.

Our key strength lies in the fact that we work closely with lighting designers, architects, interior designers & landscape engineers to develop designs & solutions that are energy-efficient and result in considerable cost savings for our clients.

Our clients are our top priority at all times. We take customer satisfaction as an indicator of our success. It is our uncompromising commitment to quality and service that has made us the preferred partner of our esteemed clients.

OUR PROJECT SPECTRUM

We take immense pride in the fact that we have been associated with some of the most iconic projects in the Middle East, be it the Burj Al Arab, Burj Khalifa, Atlantis - The Palm, Expo Metro Station, Mall of The Emirates, W Abu Dhabi at Yas Island, Citywalk, Box Park, Hili Mall, Hamad International Airport or the Kuwait International Airport to name a few. But we take greater pride in our range of projects - we have excelled in lighting projects across various sectors such as Retail, Hotels, Hospitals, Sports Complexes.

With over three decades of experience as a Lighting Solutions Provider, Integrator and Supplier of quality lighting products, we believe that "Lighting should be felt not seen". It can make all the difference between perceiving a building to be a dreary structure or a work of art. Our effort is to use lighting as a tool for enhancing the architectural beauty and its surroundings. To achieve this, we offer a distinctive collection from across the world, with modern shapes and selected designs underscoring the requirements of different projects. We ensure that every single product supplied by us is of international quality standards. In fact we associate with only those manufacturers that conform to the highest standards across the production and distribution cycle. So with us, you can be rest assured that the quality promised is the quality delivered.

PROGRAMMING

TRAINING

To ensure peace of mind to our clients, we offer complete professional lighting solutions. Our clients have the flexibility to avail our fully integrated end-to-end solutions or involve us at any stage of the project-design or execution. We work with the clients and help them match their original intent, design and quality with optimal lighting solutions within specified budget. We formulate out proposal in two parts:

A. Technical

We offer the following services at various stages:

Pre Order stage

- Light Planning

Our team of expert lighting engineers provides complete lighting schematics and layout plans based on client's required LUX levels.

- Luminaire Suggestions

We suggest the most appropriate luminaires depending on the technical requirements.

- Take-offs

Our team of lighting engineers then does the take-off from the drawings to come out with the exact amount of each light fixture required for the project.

- Bill Of Quantity

The bill of quantity is prepared as per the take-off and is submitted to the client.

- Technical Submittal

A technical submittal / presentation containing the detailed cut sheets of each luminaire with its complete technical data is given to the client.

- Commercial Offer

Our purchase department then analyzes the complete luminaire requirements and comes out with the most competitive commercial offer for the client.

- Value Engineering

Value engineering is done based on technical and commercial requirements. Approvals are taken from Lighting Consultants and Architects to match the lighting design concepts of the project.

Samples required from the project are also delivered as per client's requirements at any stage of the enquiry.

B. Commercial

Implementation Stage

- Final Take-offs

Our lighting engineers on site study the final construction drawing and arrive at the final take-offs of the quantities. It is then submitted to the client for their approval.

- Supervision at Site

Our on-site lighting engineers provide complete technical support to the MEP contractors, from inception to final completion of the project.

- Supply of Material

Our purchase department and lighting engineers together co-ordinate with the manufactures and planning managers on site for the delivery of the light fixtures and accessories based on the installation schedule.

Final Stage

- Maintenance Manual

We provide detailed maintenance manuals for all the Light fixtures and accessories supplied by us.

- After Sale Service

We provide the MEP contractors with complete technical support at the project hand-over stage and also assist them in rectifying the various site issues related to the project.

- Lighting Audits

We conduct light audits with comprehensive reports for the existing installations.

THE APPROACH

At RDK, our entire approach is project-led. The focus is on understanding the client's needs and translating them into reality rather than selling products.

- Project focused at all times
- Offer value engineering services without compromising lighting quality
- Provide best technical solutions and select the most competitive lighting manufacturer to ensure quality & cost efficiencies
- Provide optimized lighting solutions as per international standards of illumination for the benefit of the project
- Understand lighting design suitability for individual areas as provided by the manufacturer and select the best design
- Offer a bouquet of products as per the Consultants' / Architects' specifications
- Offer value engineered products / solutions to fit most hard pressed budget where required
- Get approvals from lighting consultants and architects to match the lighting design concept and budget of the project

THE ADVANTAGE

- Convenience of a single point contact
- World's leading manufacturers under one platform
- Optimized lighting solutions
- Considerable savings in capital and operational costs
- Strict adherence to technical specifications & illumination levels as specified by Consultants' and Architects' designs
- Complete support & work in cohesion with the MEP contractors
- Presence of full time on-site expert lighting engineers, from inception to final completion of project
- After sales service and maintenance manuals
